

Program: Dhatch 4.5
By: Andrea Andreetti
Date: decembre 2008

What is Dhatch ?

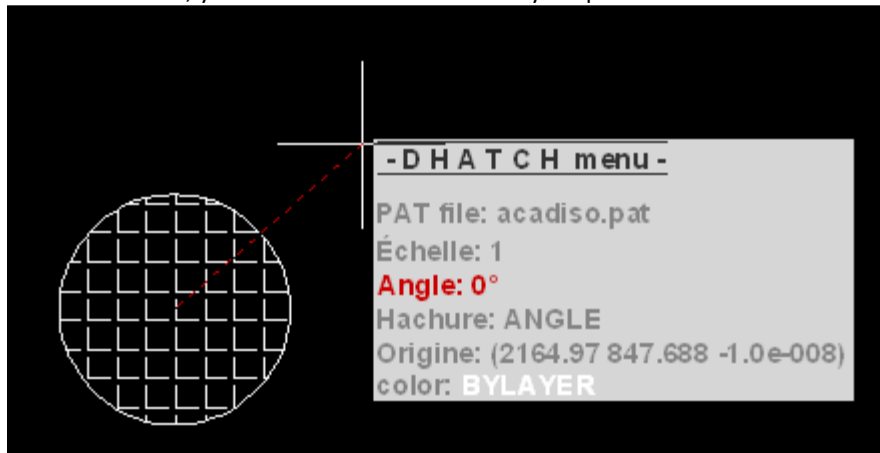

DHatch allow you to create and edit hatch in dynamic mode.

How it work ?:

- Load the dhatch.lsp file with the autoCAD "_appload" command.
- Run DHATCH

Dhatch will ask you to select an item, so you can select any closed entity (no blocks)
Dhatch is intelligent and detect boundary if you pick inside a closed entity.

Once your selections is made, you will see a little menu near your pointer. Like this :

On the AutoCAD command line you will see all the option available during the program run

- To change item options press « spacebar »
- To activate the option press « enter »
- To enter any value press « V »
- You can use dynamic mode by moving the mouse
- Use mouse right-click to accept the modifications

Each modification will be showed on real time.

You can edit existing Hatch with the « Dhatchedit » command.
